

ASSIGNMENT 2

1. Discuss the different types of variables used in Visual Basic .NET and how they differ e.g. Strings, Integers, etc. (no more than ½ page).
2. Explain in your own words what is meant by operator precedence (no more than ½ page).
3. What is an array? What are its benefits?
4. Explain in your own words the benefits of Hungarian Notation (no more than ½ page).
5. Submit the VB code from your Set Task.

Submit your answers to the assignment for feedback from your tutor. You may include any other code you have written if you want assistance or feedback on that as well.
